

# **RO3200<sup>™</sup> Series Circuit Materials**

RO3203<sup>™</sup>, RO3206<sup>™</sup> and RO3210<sup>™</sup> High Frequency Circuit Laminates

RO3203<sup>™</sup>, RO3206<sup>™</sup> and RO3210<sup>™</sup> high frequency circuit materials are ceramic-filled laminates reinforced with woven fiberglass. These materials are engineered to offer exceptional electrical performance and mechanical stability at competitive prices. The RO3200<sup>™</sup> series high frequency materials were designed as an extension of the RO3000<sup>®</sup> series high frequency circuit materials with one distinguishing characteristic - **improved mechanical stability.** 

The dielectric constant of R03203 high frequency circuit materials is 3.02. This, along with a dissipation factor of 0.0016, extends the useful frequency range beyond 40 GHz. The dielectric constant for R03206 laminate is 6.15 and 10.2 for R03210 laminate. The dissipation factor for R03206 and R03210 laminates is 0.0027.

RO3200 series laminates combine the surface smoothness of a non-woven PTFE laminate, for finer line etching tolerances, with the rigidity of a woven-glass PTFE laminate. These materials can be fabricated into printed circuit boards using standard PTFE circuit board processing techniques as described in the application note, "Fabrication Guidelines for RO3000 Series High Frequency Circuit Materials."

RO3200 series laminates are manufactured under an ISO 9002 certified quality system.

# Data Sheet

# FEATURES AND BENEFITS

Woven glass reinforcement

 Improves rigidity for easier handling

Uniform electrical and mechanical performance

 Ideal for complex multi-layer high frequency structures

#### Low dielectric loss

 High frequency performance (RO3203™ laminate) can be used in applications exceeding 20 GHz

Low in-plane expansion coefficient (matched to copper)

- Suitable for use with epoxy multi-layer board hybrid designs
- Reliable surface mounted assemblies

Excellent dimensional stability

High production yields

#### Economically priced

• Cost effective volume manufacturing

## Surface smoothness

• Allows for finer line etching tolerances

## **SOME TYPICAL APPLICATIONS:**

- Automotive collision avoidance systems
- Automotive global positions satellite antennas
- Wireless telecommunications systems
- Microstrip patch antennas for wireless communications
- Direct broadcast satellites
- Datalink on cable systems
- Remote meter readers
- Power backplanes
- LMDS and wireless broadband
- Base station infrastructure

Property	Typical Value <sup>(1)</sup>						
	RO3203	RO3206	RO3210	Direction	Unit	Condition	Test Method
Dielectric Constant, $\varepsilon_{_{\! r}}$ Process	3.02± 0.04	6.15± 0.15	10.2± 0.50	Z	-	10 GHz 23°C	IPC-TM-650 2.5.5.5 Clamped Stripline
$^{[2]}$ Dielectric Constant, $\boldsymbol{\epsilon}_{_{\boldsymbol{r}}}$ Design	3.02	6.6	10.8	Z	-	8 GHz - 40 GHz	Differential Phase Length Method
Dissipation Factor, $\tan\delta$	0.0016	0.0027	0.0027	Z	-	10 GHz 23°C	IPC-TM-650 2.5.5.5
